Disclaimer

Forward-Looking Statements

This presentation contains "forward-looking" statements within the meaning of the Private Securities Litigation Reform Act of 1995 that are based on the beliefs and assumptions and on information currently available to management of NuCana plc (the "Company"). All statements other than statements of historical fact contained in this presentation are forward-looking statements. Forward-looking statements include information concerning the company's planned and ongoing preclinical and clinical studies for the Company's product candidates and the potential advantages of those product candidates, including Acelarin, NUC-3373 and NUC-7738; the initiation, enrollment, timing, progress, release of data from and results of the Company's planned and ongoing clinical studies; the impact of COVID-19 on its preclinical studies, clinical studies, business, financial condition and results of operations; the utility of prior preclinical and clinical data in determining future clinical results; the timing or likelihood of regulatory filings and approvals for any of its product candidates; the Company's intellectual property; the amount and sufficiency of the Company's cash and cash equivalents to achieve its projected milestones; and estimates regarding the Company's expenses, future revenues and future capital requirements. In some cases, you can identify forward-looking statements by terminology such as "may," "will," "should," "expects," "plans," "anticipates," "believes," "estimates," "predicts," "potential" or "continue" or the negative of these terms or other comparable terminology.

Forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause the Company's actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. These risks and uncertainties include, but are not limited to, the risks and uncertainties set forth in the "Risk Factors" section of our Annual Report on Form 20-F for the year ended December 31, 2020 filed with the Securities and Exchange Commission ("SEC") on March 4, 2021, and subsequent reports that the Company files with the SEC.

Forward-looking statements represent the Company's beliefs and assumptions only as of the date of this presentation. Although the Company believes that the expectations reflected in the forward-looking statements are reasonable, it cannot guarantee future results, levels of activity, performance or achievements. Except as required by law, the Company assumes no obligation to publicly update any forward-looking statements for any reason after the date of this presentation to conform any of the forward-looking statements to actual results or to changes in its expectations.

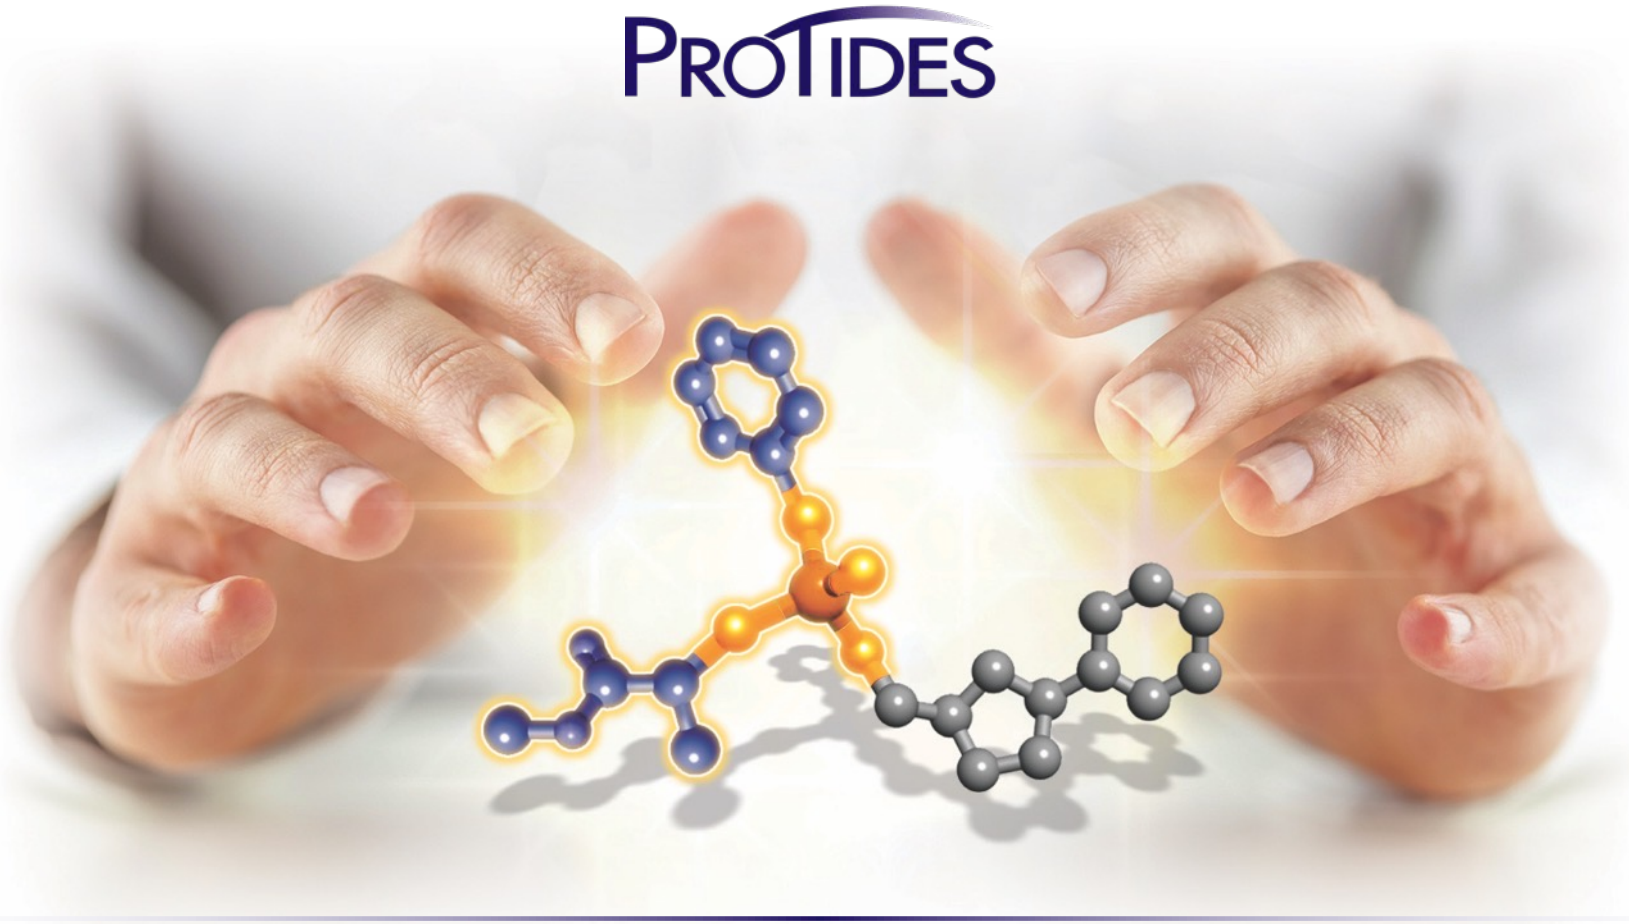
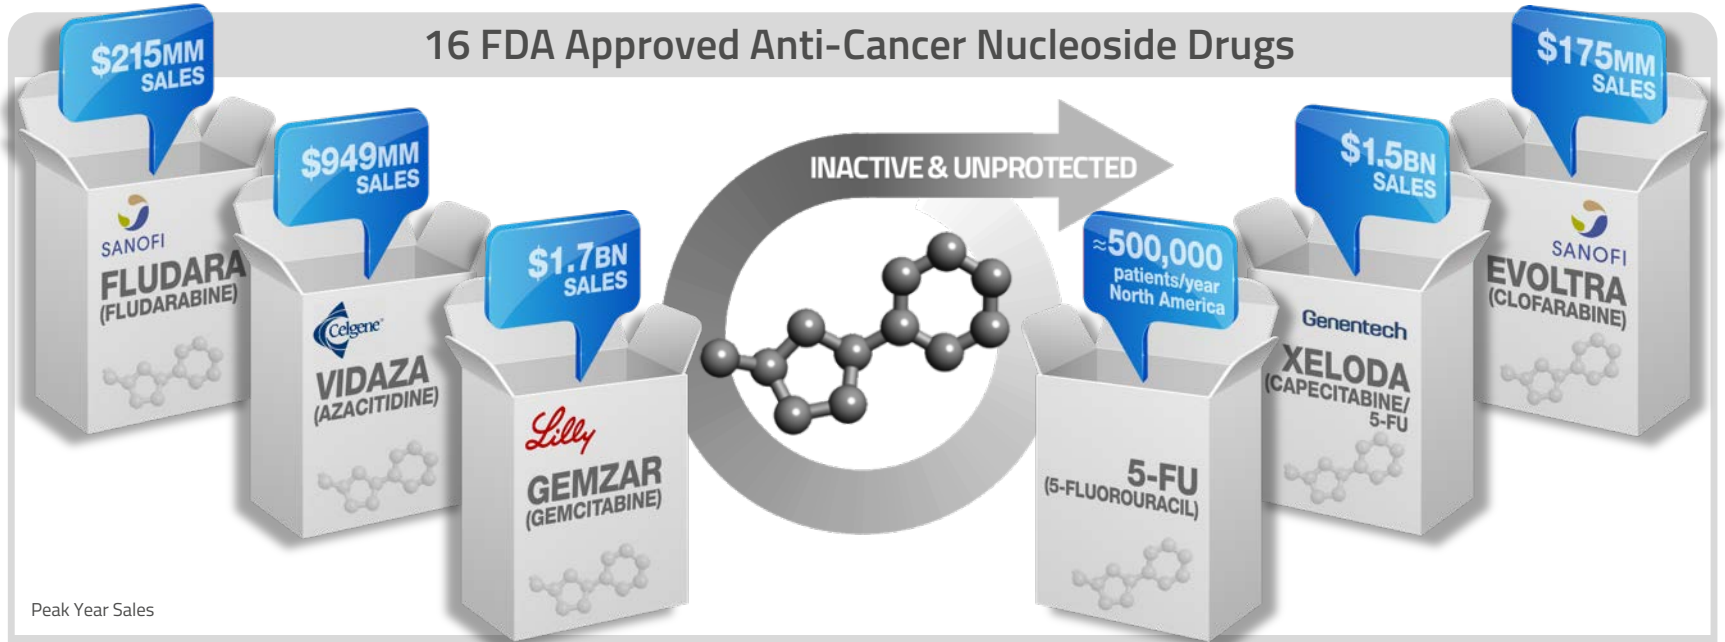
Solely for convenience, the trademarks, service marks and trade names referred to in this presentation may be without the ® and ™ symbols, but such references are not intended to indicate, in any way, that we will not assert, to the fullest extent under applicable law, our rights to these trademarks, service marks and trade names.

Harnessing the Power of Phosphoramidate Chemistry



A New Era in Oncology

Nucleoside Analogs: Flawed ProDrugs



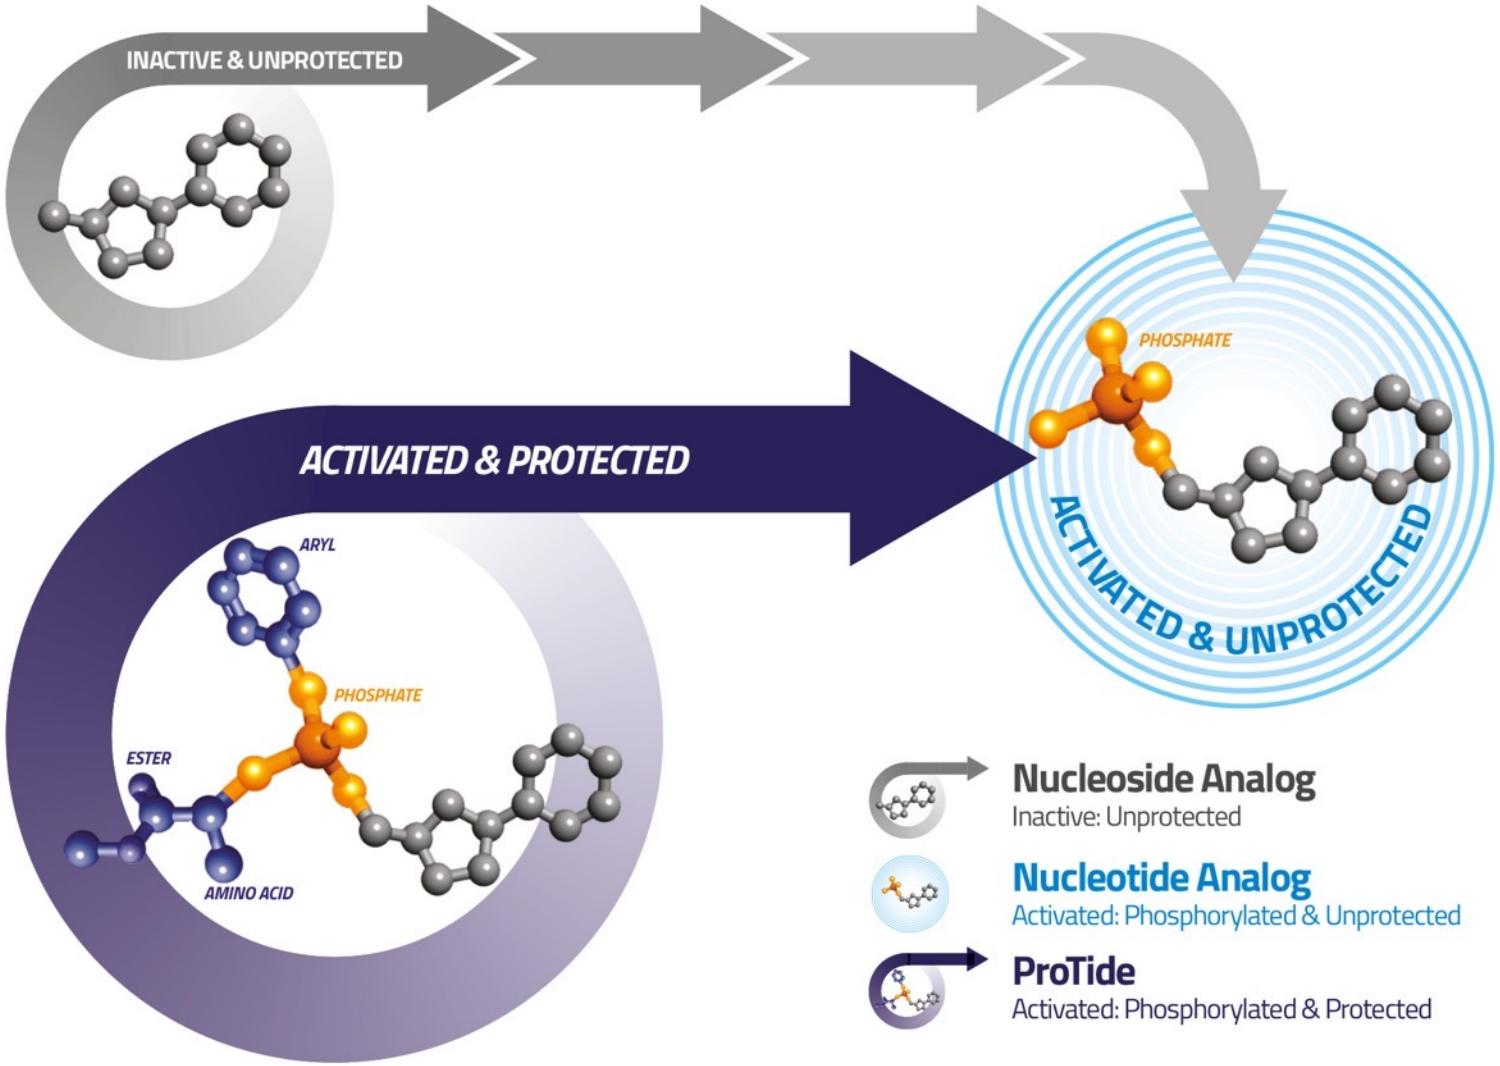
Limitations of Nucleoside Analogs

Uptake
Dependent on membrane transporters to enter cancer cells

Activation
Requires phosphorylation within cancer cells to exert anti-cancer activity

Breakdown
Subject to breakdown & generation of toxic byproducts

Transforming Nucleoside Analogs into ProTides



ProTides: A New Era In Anti-Virals

$64 billion*

SOVALDI® SOFOSBUVIR

Hepatitis C

$44 billion**

TAF

H.I.V.

$2.8 billion

Veklury® remdesivir

COVID-19

Transforms Therapeutic Index

Overcomes Viral Resistance Mechanisms

* Sovaldi + Harvoni + Epclusa + Vosevi cumulative sales through 31 December 2020

** Genvoya + Descovy + Odefsey + Biktarvy + Symtuza cumulative sales through 31 December 2020

ProTides: A New Era in Oncology

44% Overall Response Rate[1]

ACELARIN

300x More potent than 5-FU[2]

NUC-3373

185x More potent than 3′-dA[3]

NUC-7738

Transforms Therapeutic Index

Overcomes Cancer Resistance Mechanisms

Well Capitalized to Achieve Key Milestones

ACELARIN

- Complete ongoing Phase III BTC study (NuTide:121)
- **File NDA for BTC**

NUC-3373

- Complete ongoing Phase I solid tumor study (NuTide:301)
- Complete ongoing Phase Ib CRC study (NuTide:302)
- Complete Phase Ib expansion / Phase II CRC study
- Initiate and complete Phase III CRC study
- **File NDA for CRC**

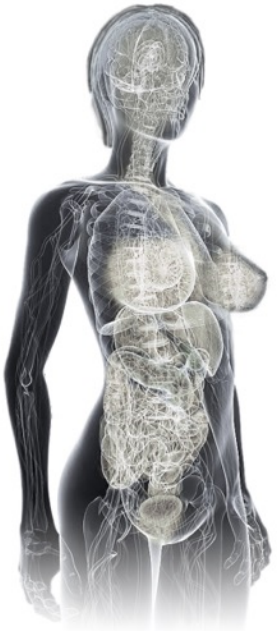
NUC-7738

- Complete ongoing Phase I study (NuTide:701)
- Initiate and complete Phase II study

ACELARIN
NUC-1031

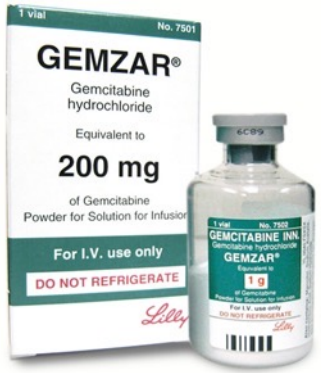
A transformation of gemcitabine

ACELARIN: Overview of Gemcitabine



- WHO list of essential medicines
- First approved for medical use in 1995
- Approved in pancreatic, ovarian, breast & lung
- Widely used in other cancers
- Peak annual sales of $1.7 billion

World Health Organization



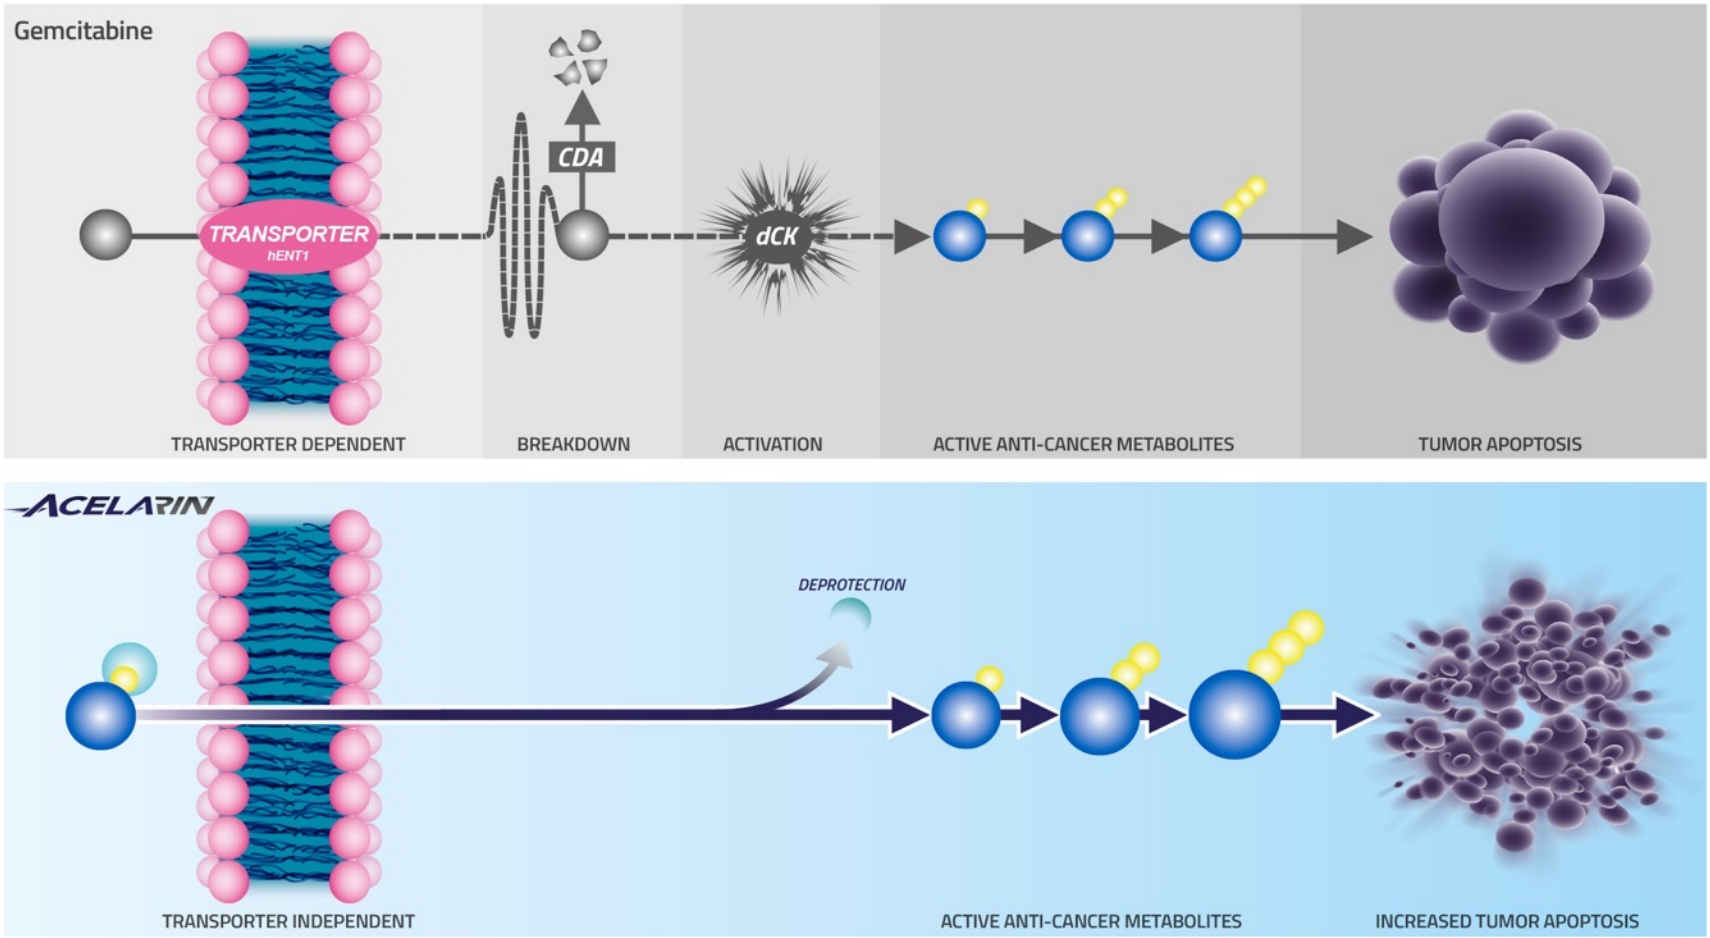
Limitations of Gemcitabine

Uptake
Dependent on membrane transporters to enter cancer cells

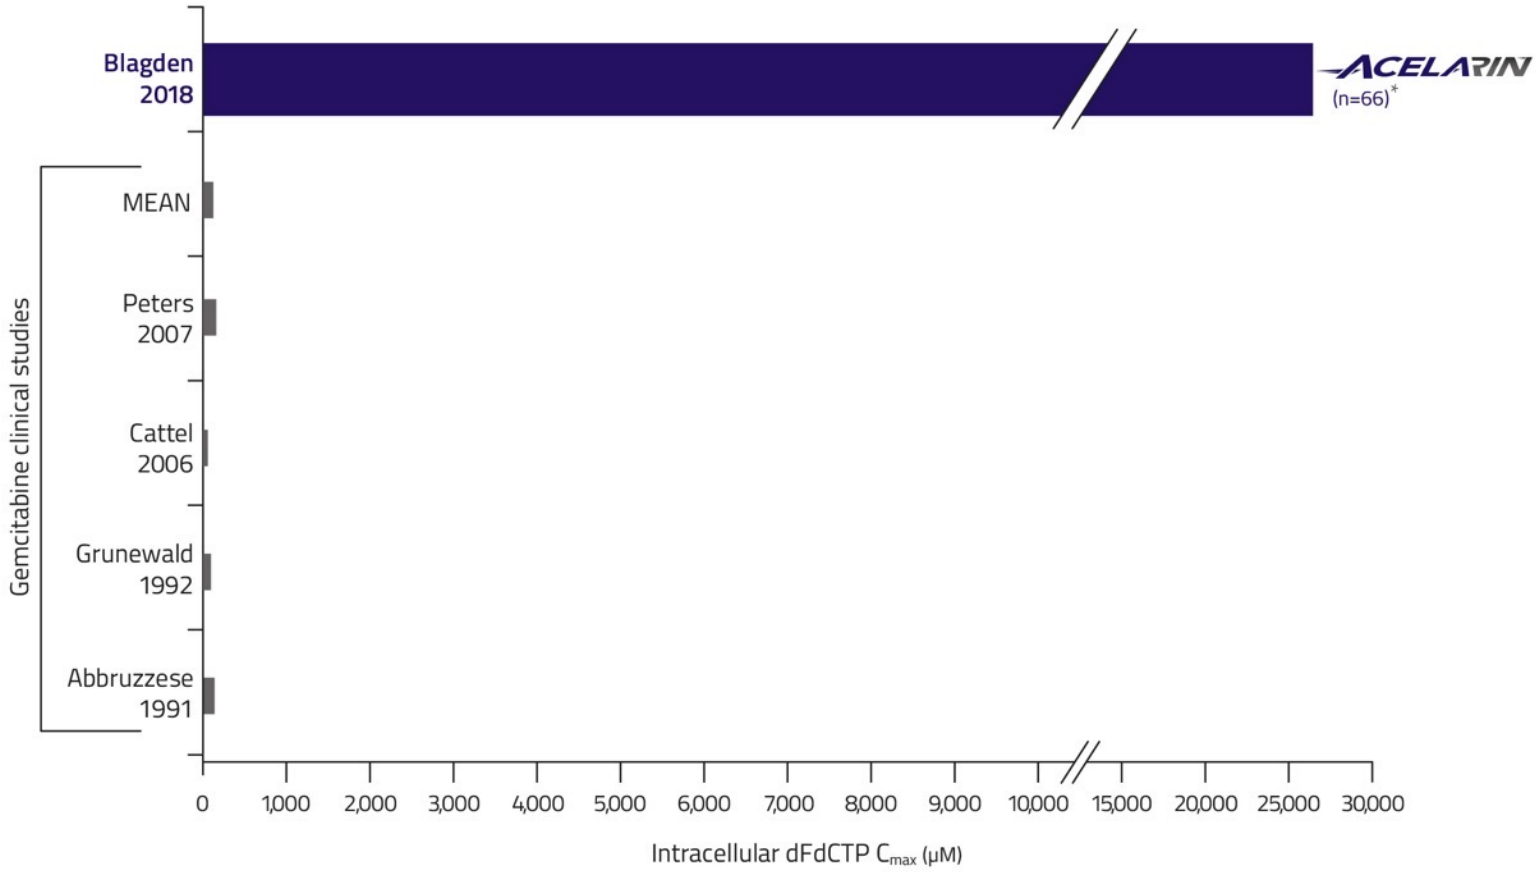
Breakdown
Subject to breakdown and generation of toxic byproducts

Activation
Requires phosphorylation within cancer cells to exert anti-cancer activity

ACELARIN: Overcomes The Key Cancer Resistance Mechanisms



ACELARIN: Very High Intracellular dFdCTP (C_{max})

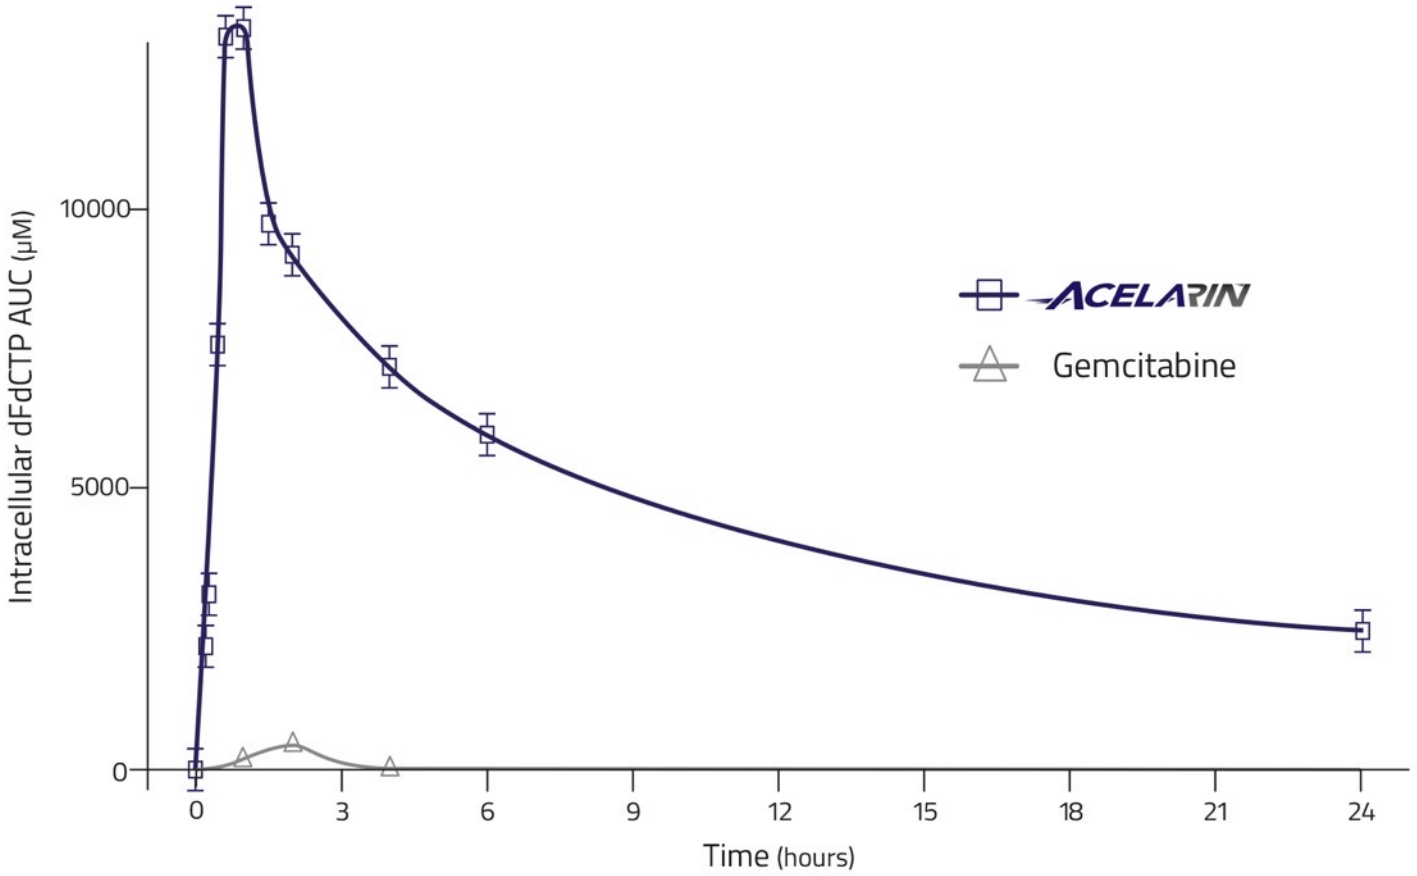


ACELARIN achieved **217x** higher intracellular levels of dFdCTP than gemcitabine

Equimolar dose comparison

* Blagden *et al* (2018) *Br J Cancer*, 119:815-822

ACELARIN: Very High Intracellular dFdCTP (AUC)



ACELARIN achieved 139x greater intracellular AUC of dFdCTP than gemcitabine

Blagden *et al* (2015) *J Clin Oncol*; 33; Suppl Abstract ID: 2547 (ASCO poster May 2015)
Cattel *et al* (2006) *Annals Onc* (supp); 17: v142-v147
Blagden *et al* (2018) *Br J Cancer*; 119:815-822

ACELARIN: Phase 1 Study (monotherapy)

- Phase 1 dose-escalation study in patients with advanced solid tumors
- All patients had metastatic spread
- Rapidly progressing disease
- Exhausted all other therapeutic options
- Objective: Recommended Phase 2 dose

PRO-001

Number of patients	Evaluable patients (≥2 cycles)	Primary cancer types	Age (median)	Prior chemotherapy regimens
68	49	19	56 (range 20-83)	3 (range 1-10)

Blagden *et al* (2018) *Br J Cancer*; 119:815-822

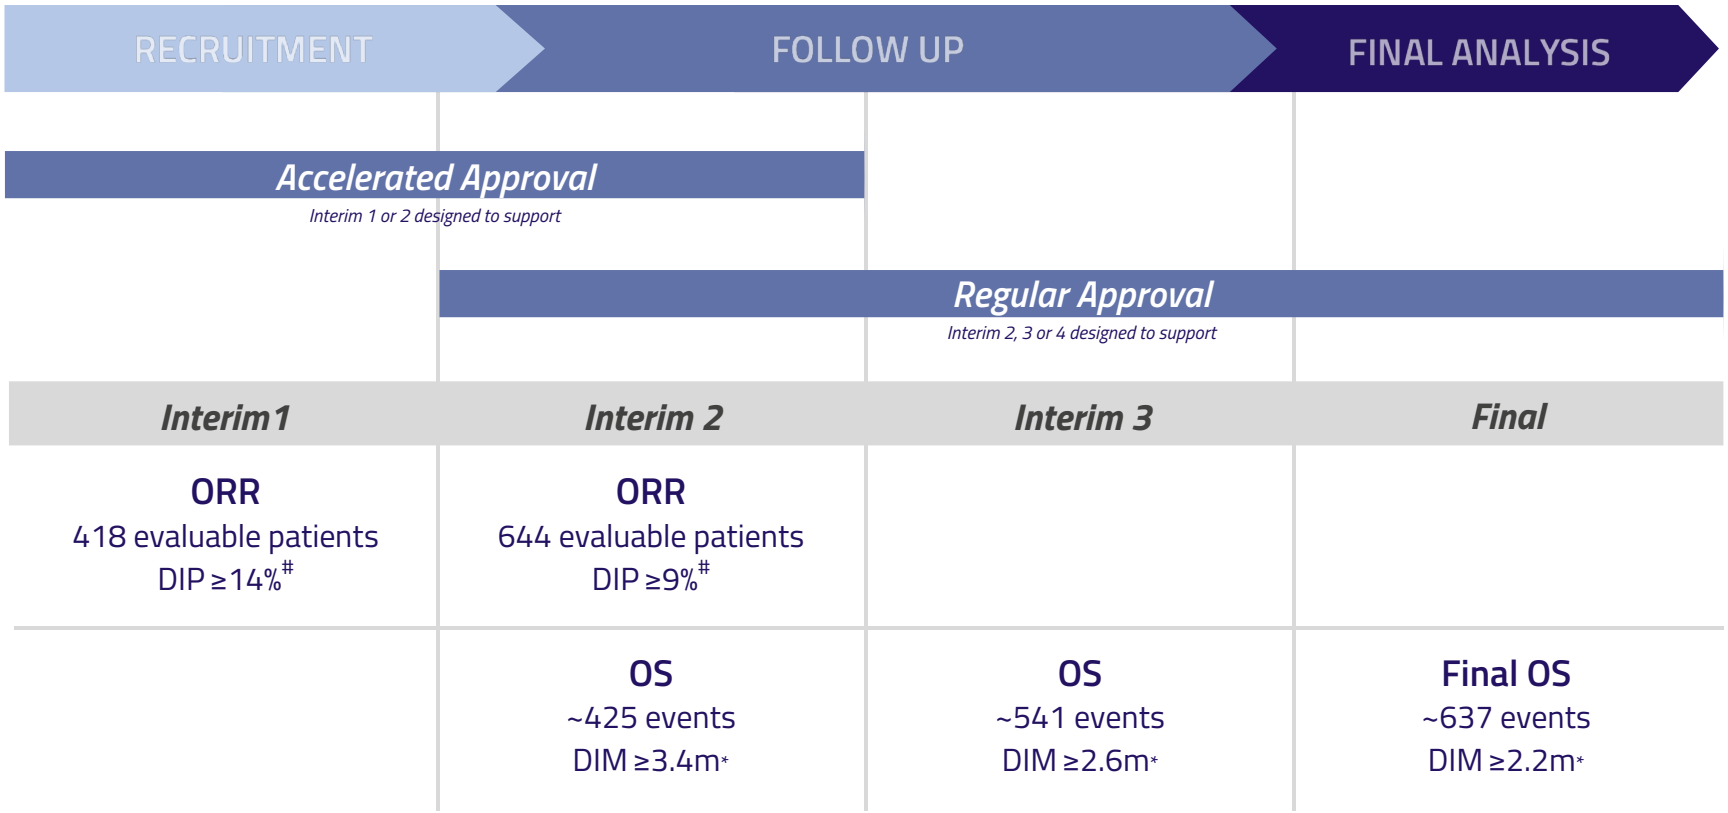
Enrollment | *Treatment* | *Endpoints*

NuTIDE 121

ACELARIN: Biliary Phase 3 Study (Statistical Plan)

Primary Endpoints: OS; ORR



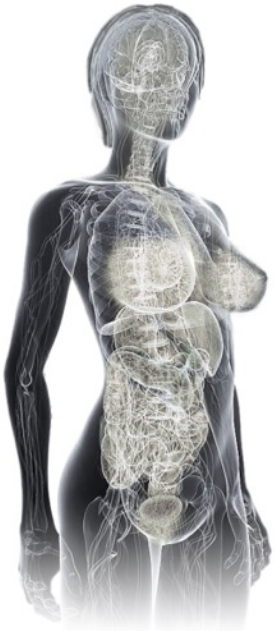
DIP = Difference in observed proportions (vs. an estimated 19.0%) for statistical significance. Measurable disease at baseline and ≥28 weeks follow-up.
* DIM = Difference in observed medians (vs. an estimated 11.7 months) for statistical significance.

NUTIDE 121

NUC-3373

A transformation of 5-FU

NUC-3373: Overview of Fluorouracil (5-FU)

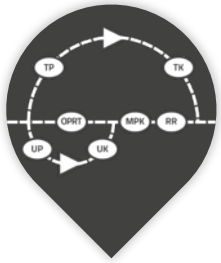


- WHO list of essential medicines
- First approved for medical use in 1962
- ~500,000 patients receive 5-FU annually in North America
- Unpredictable PK profile
- 10-15% Overall Response Rate (colorectal cancer)

Limitations of Fluorouracil (5-FU)

Breakdown
>85% breakdown by DPD, generating toxic byproducts

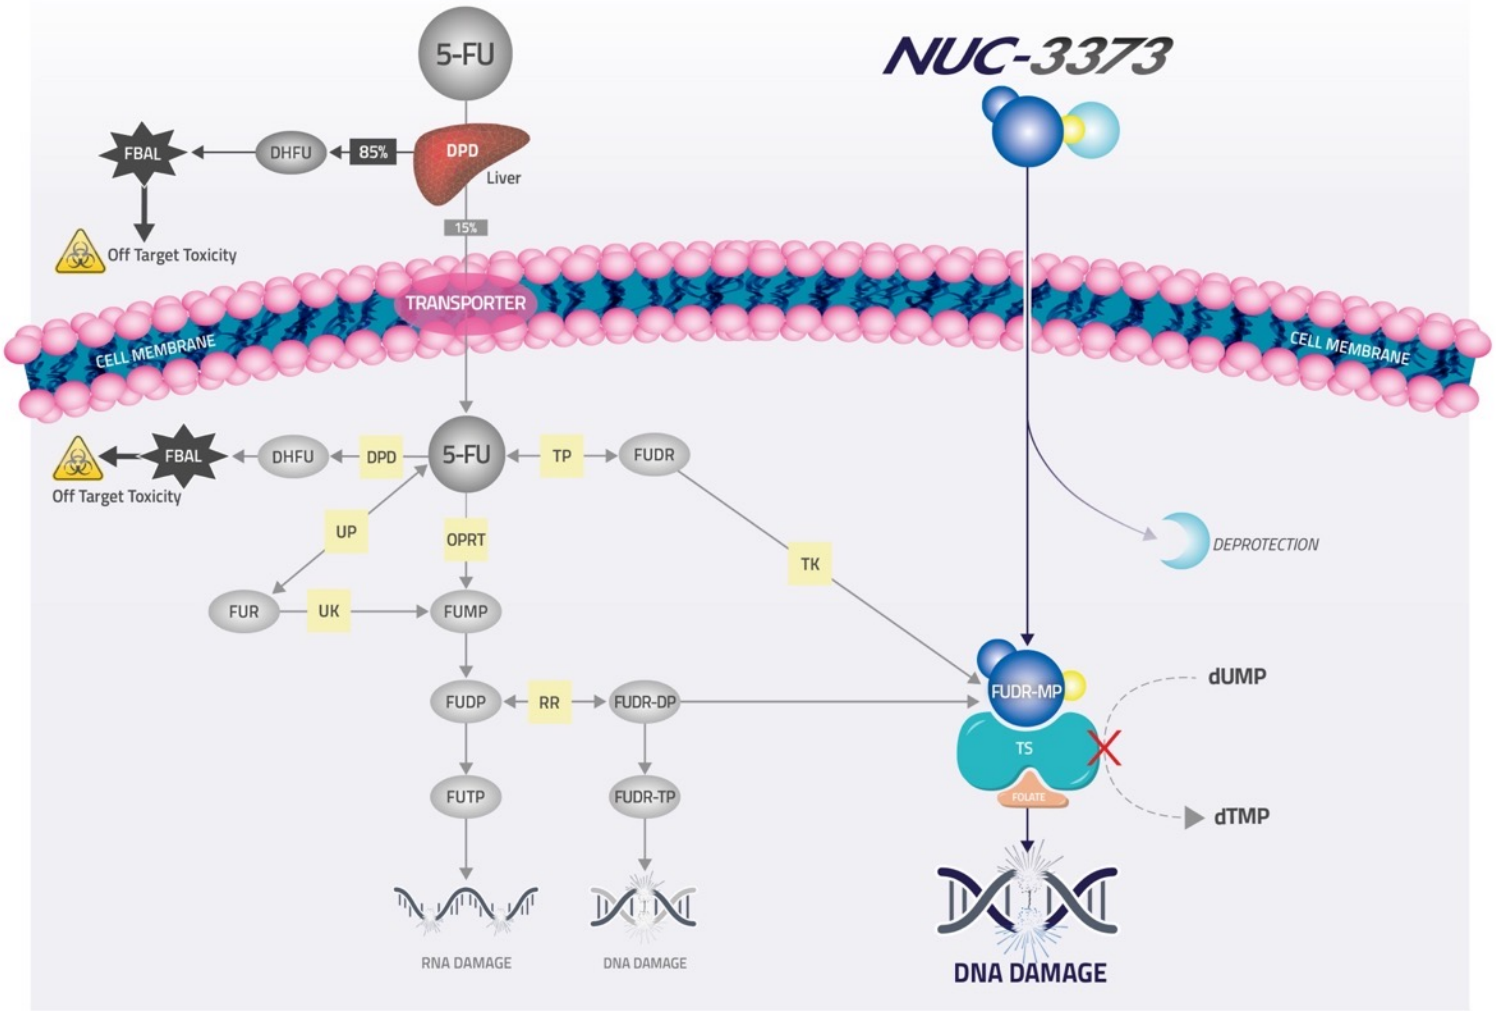
Transport
Requires active transport



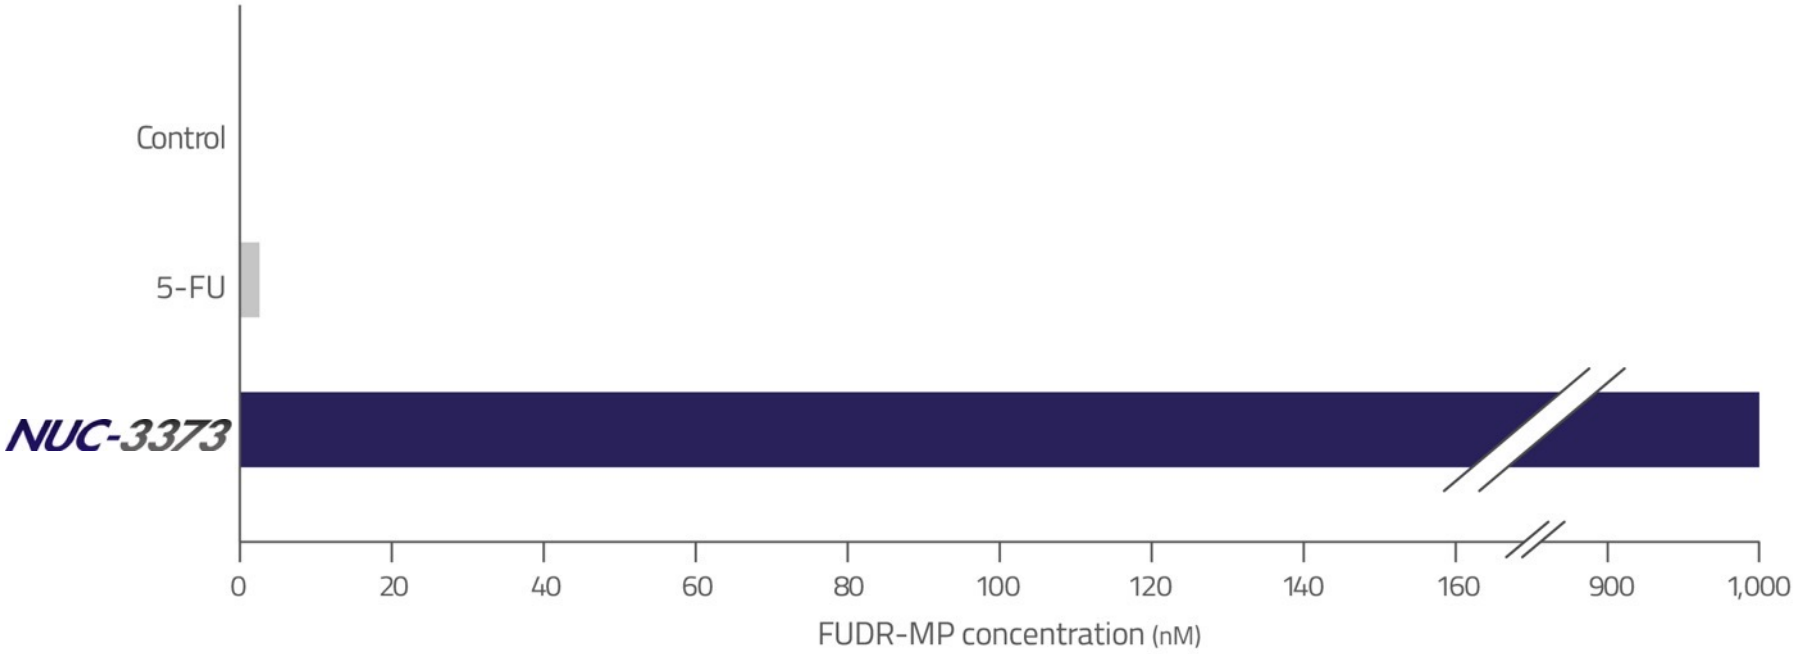
Activation
Multi-step phosphorylation process

Dosing
46-hour continuous infusion

NUC-3373: 5-FU Metabolism and Mechanism of Action Comparison



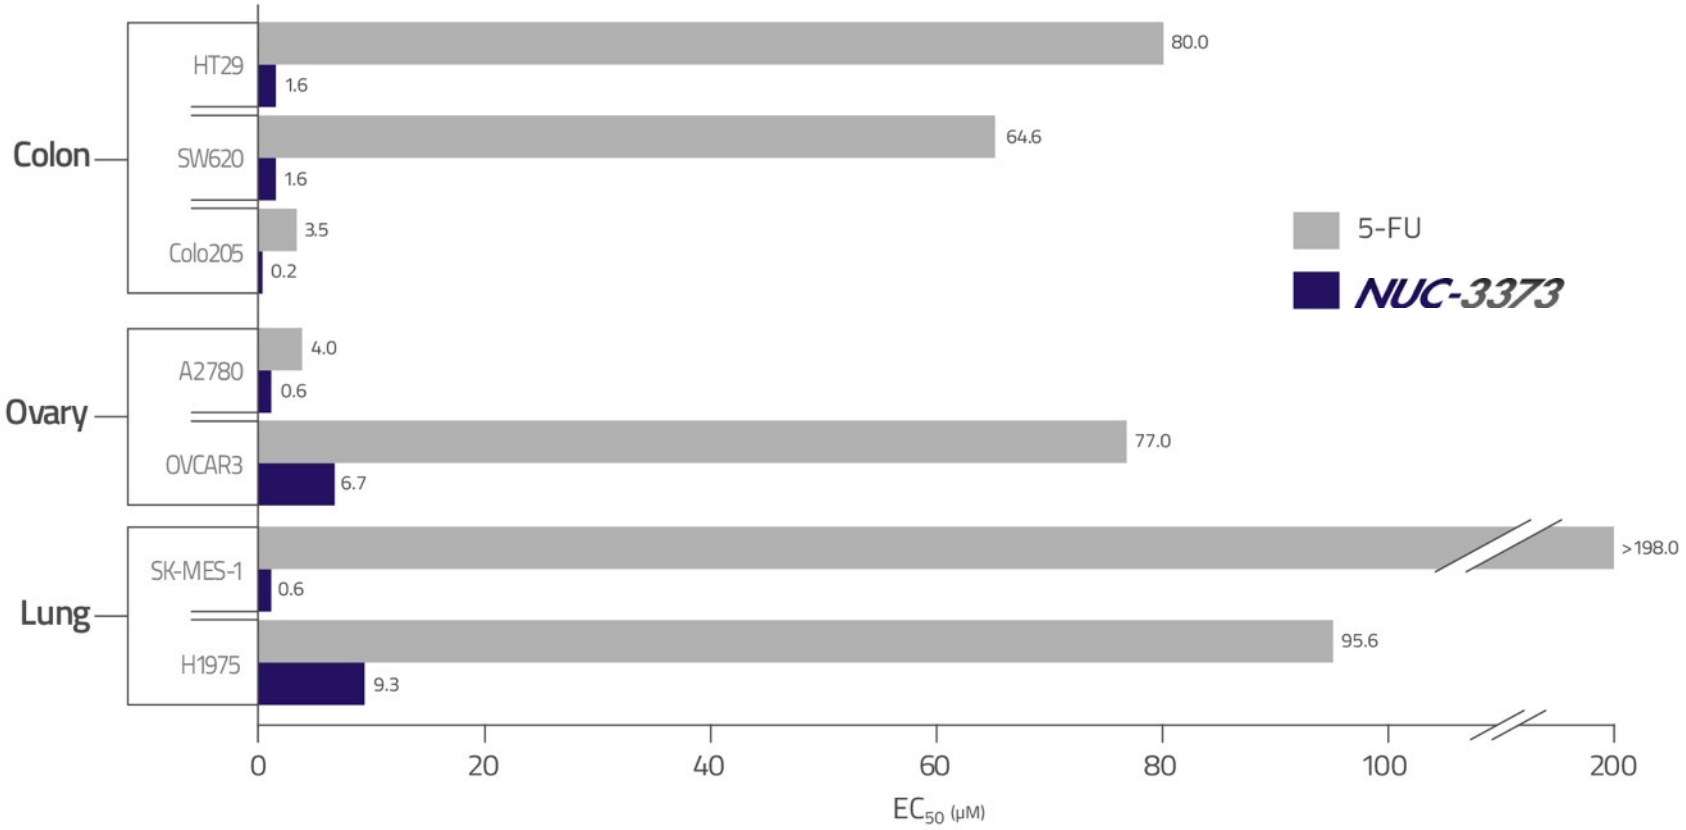
NUC-3373: Very high Intracellular FUDR-MP (pre-clinical)



NUC-3373 generated **366x** higher levels of active anti-cancer metabolite FUDR-MP than 5-FU

Equimolar dose comparison
Ghazaly *et al* (2017) *Ann Oncol*; 25: Suppl 5 Abstract ID:385P (ESMO poster September 2017)

NUC-3373: Greater Anti-Cancer Activity than 5-FU (pre-clinical)



NUC-3373 had up to **330x** greater anti-cancer activity than 5-FU

Ghazaly *et al* (2017) *Ann Oncol*; 25: Suppl 5 Abstract ID:385P (ESMO poster September 2017)

NUC-3373: Ongoing Phase 1 Study

- Phase 1 dose-escalation study in patients with advanced solid tumors
- All patients have metastatic spread
- Rapidly progressing disease
- Exhausted all other therapeutic options
- Objective: Recommended Phase 2 dose + schedule

NuTide 301

Number of patients (enrolled to date)	Age (median)	Prior chemotherapy regimens
36	60 (range 21-78)	3 (range 1-6)

Blagden *et al* (2018) *Ann Oncol*; 29: Suppl 8 Abstract ID: 442TiP (ESMO poster October 2018)
Data as of September 2018

NUC-3373: Ongoing Solid Tumor Phase 1 Study (interim data)

Favorable safety profile

- NUC-3373 is well-tolerated
- No hand-foot syndrome
- Grade 3 treatment-related AEs (3 transaminitis, 1 fatigue, 1 shingles)
- No Grade 4 AEs

Metastatic Colorectal Cancer

70 years, male
6 prior lines

1) 5-FU:
based chemoradiotherapy (adjuvant)
2) FOLFIRI:
for metastatic disease
3) CAPOX:
progressed within **2 months**
4) FOLFIRI:
progressed within **8 months**
5) LONSURF:
progressed within **3 months**
6) Irinotecan:
treatment for **1 month**

NUC-3373
1,500 mg/m^2 q1w

Stable Disease:
9 months

Metastatic Basal Cell Carcinoma

55 years, male
2 prior lines

1) Vismodegib:
for **11 months**
2) Paclitaxel + carboplatin:
for **3 months**

NUC-3373
1,500 mg/m^2 q2w

Stable Disease:
10 months

Metastatic Cholangiocarcinoma

60 years, female
1 prior line

1) Gemcitabine + cisplatin:
progressed within **6 months**

NUC-3373
1,125 mg/m^2 q1w

Stable Disease:
11 months

NUTIDE 301

NUC-3373: Ongoing Colorectal Phase 1b Study (interim data)

Colorectal Cancer

67 years, female
3 prior lines

1) CAPOX (adjuvant):
for **3 months**
relapsed 9 months post-adjuvant therapy
2) FOLFIRI:
progressed within **3 months**
3) Lonsurf:
progressed within **3 months**

RAS unknown
Target lesions: 1 (peritoneum)

NUC-3373
2,500 mg/m^2 q1w

40% reduction in tumor volume

Partial Response:
3.5 months

Colorectal Cancer

69 years, male
2 prior lines

Diagnosed with metastatic disease

1) CAPOX:
progressed within **2 months**
tumor **increase of 35%**
2) FOLFIRI:
progressed within **1.5 months**

RAS unknown
Target lesions: 2 (liver)

NUC-3373
1,500 mg/m^2 q1w

28% reduction in tumor volume

Stable Disease:
5.1 months*

Colorectal Cancer

52 years, male
5 prior lines

1) FOLFOX (adjuvant):
for **4 months**
relapsed 4 months post-adjuvant therapy
2) FOLFIRI:
progressed within **6 months**
3) Irinotecan + panitumumab:
progressed within **6 months**
4) Irinotecan + panitumumab + telaglenastat:
progressed within **6 months**
5) Nivolumab + enadenotucirev:
progressed within **3 months**

RAS wildtype; BRAF mutant
Target lesions: 3 (2 lung; 1 liver)

NUC-3373
1,500 mg/m^2 q2w

15% reduction in tumor volume

Stable Disease:
4.5 months

* patient missed 6 consecutive doses due to COVID-19 and progressed, but continued on study for a total of 8 months due to clinical benefit

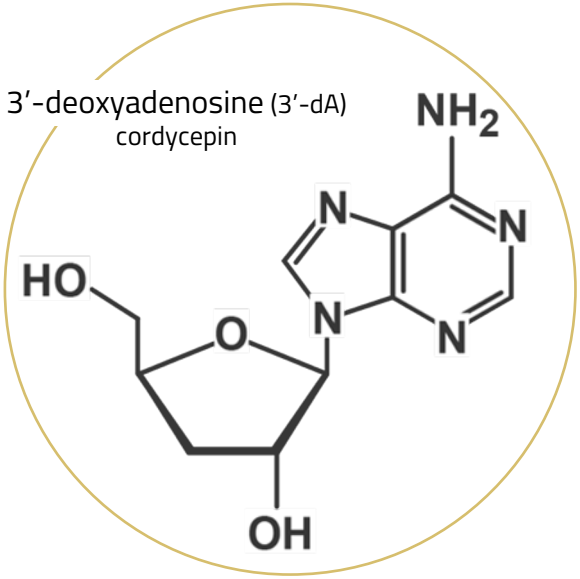
NUC-7738

A transformation of 3′-deoxyadenosine

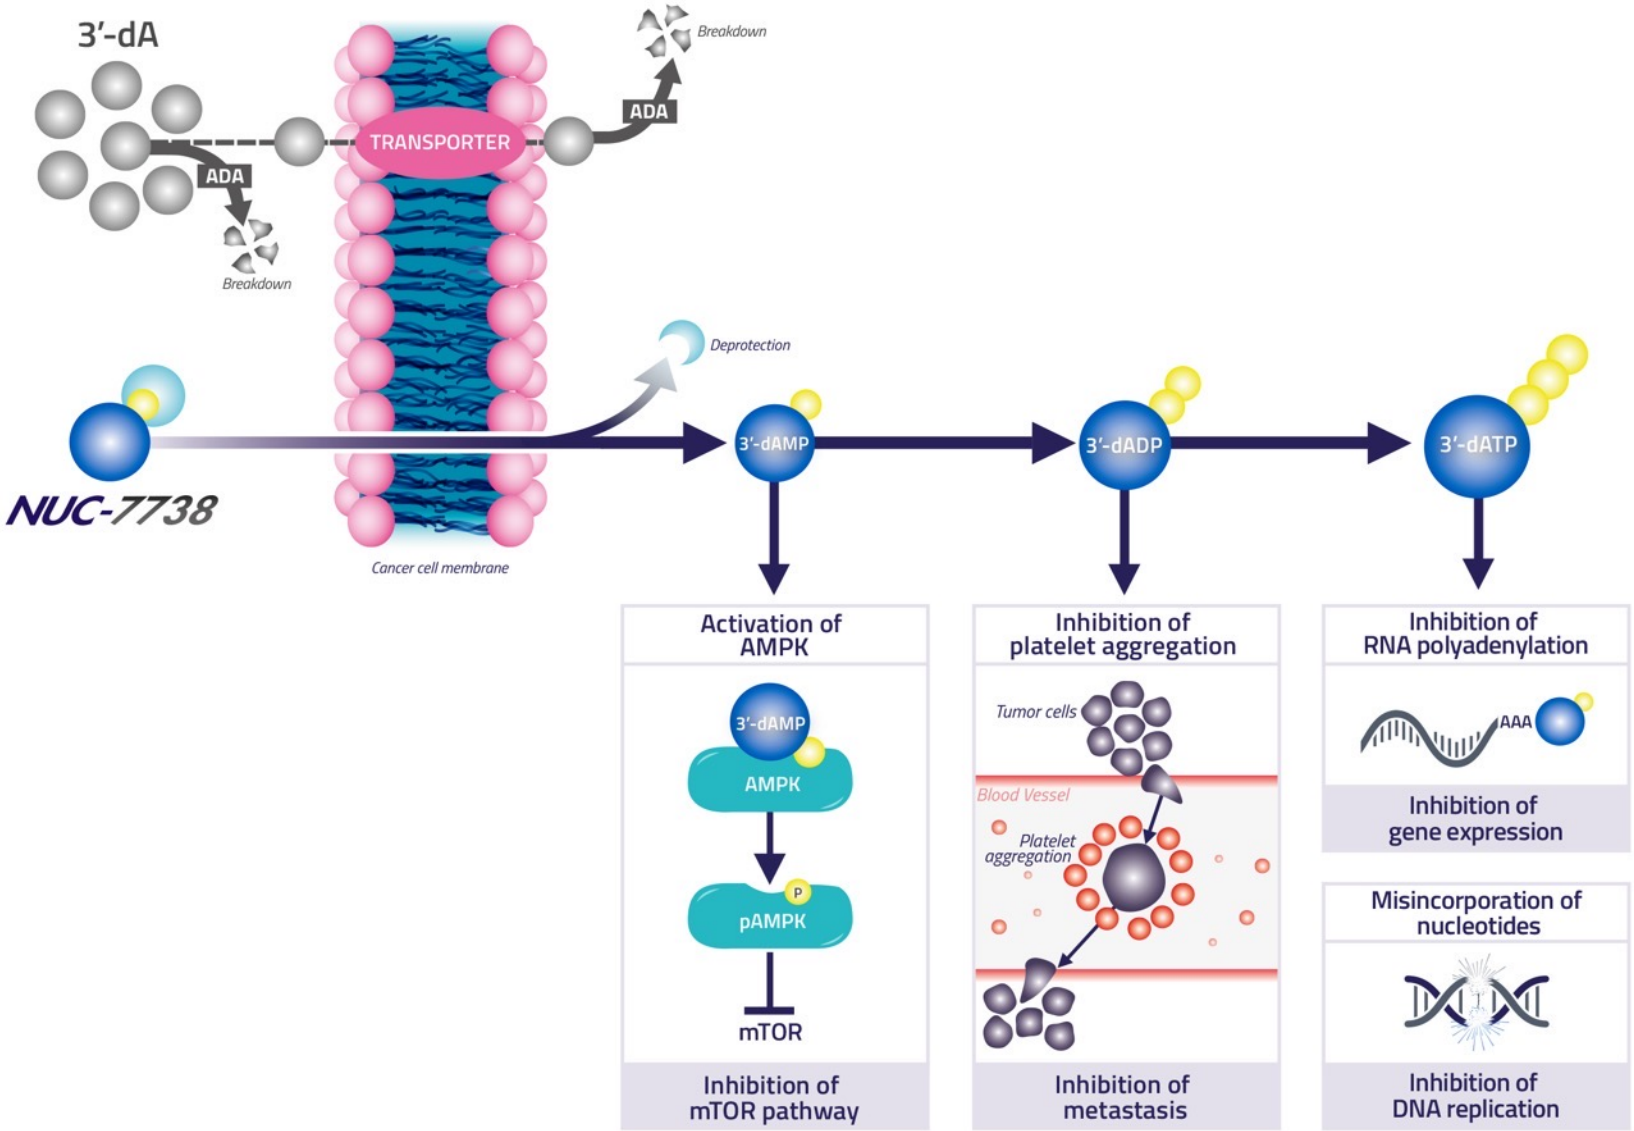
NUC-7738: Origin of 3'-deoxyadenosine

Cordycepin: A Traditional Chinese Medicine



1950: **3'-dA** isolated from ***Cordyceps sinensis***

NUC-7738: Multiple Anti-Cancer Modes of Action



NUC-7738: Ongoing Phase 1 Study

- Phase 1 dose-escalation study in patients with advanced solid tumors
- All patients have metastatic spread
- Rapidly progressing disease
- Exhausted all other therapeutic options
- Objective: Recommended Phase 2 Dose + Schedule

NuTide 701

Number of patients (enrolled to date)	Age (median)	Prior chemotherapy regimens
21	63 (range 46-76)	3 (range 1-5)

Plummer *et al* (2021) Abstract ID: CT136 (AACR April 2021)

NUC-7738: Ongoing Solid Tumor Phase 1 Study (interim data)

Favorable safety profile
- No Grade 3 or 4 treatment-related AEs
- No DLTs

Attractive PK profile
- Efficient conversion of NUC-7738 to 3'-dATP
- Prolonged intracellular half-life of 3'-dATP (>50 hours)

Metastatic Melanoma

62 years, female
2 prior lines

1) Nivolumab + ipilimumab:
discontinued within **1 month**

2) CK7 inhibitor:
progressed within **1 month**

Target lesion: 1 (pelvic side wall)

NUC-7738
Starting dose 14 mg/m^2 q1w
(8 dose escalations)

14% reduction in tumor volume

Treatment Duration:
18 months
(Stable disease for 12 months, then re-established)

Metastatic Melanoma

65 years, female
1 prior line

1) Nivolumab + ipilimumab:
discontinued within **1 month**

Target lesion: 1 (lung)

NUC-7738
Starting dose 400 mg/m^2 q1w
(1 dose escalation)

7% reduction in tumor volume

Treatment Duration:
9 months **(ongoing)**
(Stable disease for 8 months, then re-established)

Metastatic Lung Adenocarcinoma

65 years, male
2 prior lines

1) Carboplatin + pemetrexed:
progressed at **6 months**

2) Docetaxel:
progressed at **4 months**

Target lesions: 2 (lung)

NUC-7738
Starting dose 42 mg/m^2 q1w
(4 dose escalations)

46% reduction in target lesion 1

Treatment Duration:
6 months

NuTIDE 701

Plummer *et al* (2021) Abstract ID: CT136 (AACR April 2021)

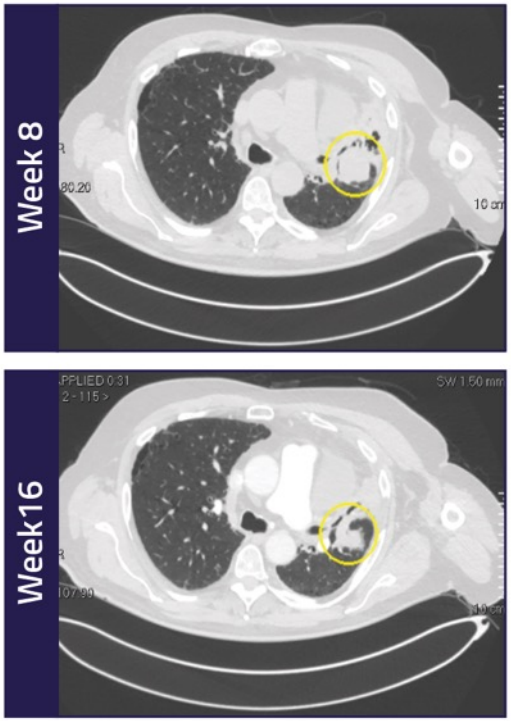
NUC-7738: Ongoing Solid Tumor Phase 1 Study (interim data)

Metastatic Lung Adenocarcinoma

65 years, male - **2 prior lines**

Target Lesion 1:

Encouraging signs of anti-tumor activity with a **46% reduction** in lesion between week 8 -16 (41mm to 22mm)



Target Lesion 2:

Positive change in character (week 8 -16), with a smaller dense core surrounded by a larger diffuse "ground-glass" periphery

Key Milestones: 2021

ACELARIN	PHASE	EVENT	2021 1H	2021 2H
Biliary	Phase III	Complete recruitment for first interim analysis		X
NUC-3373				
Solid Tumors	Phase I	Data	X	
Colorectal	Phase Ib	Data	X	
Colorectal	Phase Ib expansion / Phase II	Data	X	X
Colorectal	Phase III	Initiate study		X
NUC-7738				
Solid Tumors / Hematologic	Phase I	Data	X	
Solid Tumors / Hematologic	Phase II	Initiate study		X

Investment Highlights

Improving Survival Outcomes

Focused on significantly improving survival outcomes for patients with cancer by applying our phosphoramidate chemistry technology

First-In-Class

Acelarin has achieved impressive response rates and has the opportunity for accelerated approval in front-line biliary tract cancer

Broad IP Protection

Strong IP position for all product candidates and worldwide exclusive rights

Standard of Care

NUC-3373 has the potential to replace 5-FU in colorectal cancer and other solid tumors

Significant Milestones

Numerous value inflection points throughout 2021 and 2022

Novel ProTide

NUC-7738 is a transformation of a novel nucleoside analog and has multiple anti-cancer modes of action

Experienced Team

Accomplished management team, backed by leading biotech investors
